ANYWARE TECHNOLOGY ADDS THREE NEW KEY PERSONNEL

*Fast Growing Software Developer Hires Director of Channel Sales, Telemarketing
Account Manager and Quality Assurance Engineer*

CITY OF INDUSTRY, CALIFORNIA (October 16, 1998) ... Anyware Technology, the company that introduced the concept of a *personal* Virtual Private Network, today announced the addition of three new key personnel. The new hires have been made to support the company's rapid growth due to the success of its secure remote access and communications software product, the EverLink™ Suite. Joining the company are Jonathan Page as director of channel sales, Juan Lopez as telemarketing account manager, and Anaida Navasardyan as quality assurance engineer.

Jonathan Page, Anyware Technology's new director of channel sales, is responsible for developing the company's Channel Partner Program and VAR relationships. Mr. Page brings over ten years of comprehensive sales management and high technology expertise to the organization. He has consistently provided extensive growth and profitability to companies throughout his career. Most recently, he was the Western Regional Sales Manager for Datatech Enterprises, where he generated significant growth of the company's VAR network and sales volume, and developed key government and private accounts including the Department of the Navy, Chevron, Blue Cross/Blue Shield and Nordstrom. Mr. Page holds a BA in Psychology from California State University, Fullerton, and is working toward an MS in Systems Management from the University of Southern California.

As telemarketing account manager, Juan Lopez is responsible for qualifying leads, which will then be passed on to Channel Partners for follow-up as part of Anyware Technology's Channel Partner Program. He comes to Anyware Technology directly from Xerox Corporation, where he oversaw sales and promotion for the full range of Xerox products. His experience at Xerox included developing and executing account strategies and managing the sales process from initial call to 100% customer satisfaction. Mr. Lopez holds a BA in Management from New Mexico Highlands University.

Quality assurance engineer Anaida Navasardyan will oversee management of the rigid quality assurance standards for Anyware Technology's software products. She has over nine years of quality assurance experience for both hardware and software products. Most recently as Senior Quality Assurance Analyst for CyberMedia Inc., she was responsible for testing of a wide array of domestic and international software products. Prior to that, she served as Quality Assurance Supervisor for five years at Magnetic Sensor Systems. Ms. Navasardyan holds a BS in Electrical Engineering from Polytechnical University in Armenia, and a Computer Programming diploma from the Institute of Computer Technology.

“We are very pleased to be able to attract such high-quality talent to Anyware Technology,” said Glenn Hunter, vice president of marketing and sales for Anyware Technology. “The success of the EverLink Suite has been a catalyst for growth in our company, and we're excited about the contributions Jonathan, Juan and Anaida will make as we establish our position in the remote access and communications industry.”
