ANYWARE TECHNOLOGY INCLUDES 30-DAY TRIAL OF ESAFE ANTI-VIRUS/ANTI VANDAL SOFTWARE WITH ITS PERSONAL VPN PRODUCT

Pioneer of Remote Access & Secure Communications Software Partners With ESafe Technologies To Enhance EverLink Suite With Anti-Virus/Anti-Vandal Protection

CHICAGO, ILLINOIS, CSI 98 Conference (Nov. 2, 1998) ... Anyware Technology, the company that introduced the concept of a *personal* Virtual Private Network, today announced at the Computer Security Conference & Exhibition a partnership agreement with eSafe Technologies, a leading provider of anti-virus/anti-vandal software. Under the terms of the agreement, a free 30-day trial version of eSafe Protect Enterprise™, the award winning anti-virus/anti-vandal software product, will be bundled with Anyware Technology's EverLink™ Suite of remote access and secure communications software.

EverLink Suite is a Java™-based application that provides organizations with a peer-to-peer solution for private and secure electronic mail, file transfers and instant messaging over wide area networks (WANs) or the Internet. eSafe Protect Enterprise is a cost-effective, network-based, centrally managed anti-vandal and anti-virus system. Because eSafe Protect Enterprise is easy to install and maintain, it can save network managers hours of time installing and updating Internet protection network-wide.

The combination of these products is a perfect fit, providing enhanced security for remote access - an issue that is more and more important as enterprises increasingly use the Internet as a pivotal business tool.

"Safeguarding sensitive corporate information in a networked environment is a challenge that must be tackled from a number of directions," said Glenn Hunter, vice president of marketing and sales for Anyware Technology. "Bundling eSafe Protect Enterprise with EverLink Suite allows us to offer our customers a total remote access and secure communications solution that includes powerful anti-virus/anti-vandal protection."

"We are very pleased eSafe Protect Enterprise has been chosen to add the vital component of content protection to Anyware Technology's state-of-the-art network security solution," said Yael Sachs, CEO of eSafe Technologies, Inc. "The combination of our leading security products allows corporations to fully leverage the benefits of the Internet for remote access and communications without risking the integrity of their networks."

Pricing and Availability

Anyware Technology's EverLink software is shipping immediately, with a free 30-day trial of eSafe Protect Enterprise included on the EverLink CD. EverLink is sold in a variety of license configurations, depending on the number of users and the encryption level required. For example, prices begin at \$845 for 25 users, \$10,495 for 1,000 users, and \$15,995 for 5,000 users. Additional pricing information is available from Anyware Technology or through the company's channel partners.

About eSafe Technologies, Inc.

eSafe Technologies Inc., based in Seattle, WA, was founded in April 1997 by leading security expert, Shimon Gruper -- the creator of technologically innovative anti-virus and security software. eSafe Technologies has capitalized on Gruper's more than ten years of experience in cutting-edge development in both anti-virus and access control technology. eSafe Technologies is addressing Internet protection issues for the PC user across all U.S. market segments and across the world, including the United Kingdom, Japan, Israel, the Netherlands, and South Africa.
